Education

KR Mangalam World School

High School Diploma

Grade 12 percentage - 95

Manipal Institute of Technology, Manipal

B.Tech Information Technology

CGPA - 8.93 (up-till Semester IV)

April 2018 – April 2024

Gurugram, Haryana

July 2024 – Present

Manipal, Karnataka

Technical Skills

Languages: Python, Java, C, C++, SQL

Tools: Git, Vercel, Render, Pandas, Numpy, Matplotlib, Postman, OpenCV

Web Development: HTML, CSS, Javascript, Tailwind CSS, MongoDB, Express.js, React.js, Node.js

Coursework: Data Structures, Analysis of Algorithms, Artificial Intelligence, Computer Networks, Operating Systems, Database Management, OOP, Computer Organization

Projects

GitCompass | *React, FastAPI, Python, Supabase, D3.js* | [G](#) [GitHub](#)

August 2026

- Co-Developed GitCompass, a repository intelligence tool capable of analyzing up to 500 sequential commits and 2,000 hotspots within the codebase to provide development stories and visual graphs while ensuring strict backend memory consumption limits.
- Platform built using React, Vite, FastAPI, Python, and Supabase. Integrated the Gemini API for automated insights, GitPython for analyzing repositories, JWT for security, Row-Level Security for secure data isolation, and D3.js for interactive visualizations.
- Addressed the problem of analyzing unknown codebases through transforming complicated repository history into clear visual insights and AI driven summaries that could help developers shorten their onboarding process and understand the architectural changes.

ConceptMap | *MERN Stack* | [Live](#) | [G](#) [GitHub](#)

June 2026

- Built a full-stack application for knowledge graph visualization, using technologies such as React, Node.js, Express and MongoDB, allowing to build concepts nodes and specify relationship types and their level of understanding on the canvas.
- Created a four-layer REST API (Service → Controller → Route → Server) with JWT-based authentication, and used React Flow library for graph visualization, while preserving the memoized node state during render cycles.
- Supports real-time graph updates across 50+ concept nodes with no perceptible rendering lag, maintaining smooth pan and zoom interactions through React Flow's virtualized canvas.

Aurora'26 Web Portal | *React.js, tailwindcss* | [G](#) [GitHub](#)

January 2026

- Built the Hackathon event page and core team management features for Aurora'26 by ISTE Manipal, including user registration, team creation, and join/leave flows with form validation.
- Integrated front-end UI components with backend REST APIs, implementing a responsive navigation bar and footer for uniform layout on all pages.
- Successfully handled 600+ registrations for events through the portal, helping to create a smooth user experience during the event.

Leadership

IEEE SBM

August 2025 – May 2026

Development Domain POC

Manipal, Karnataka

- Mentored juniors in getting started with HTML, CSS, and JavaScript.
- **D3crypt '26:** Collaborated on developing a pop culture quiz game for over 250 participants, featuring interactive hints, real-time scoring, and a live leaderboard.
- **The Last Broadcast '26:** Collaborated on building an immersive web-based CTF experience for IEEE's flagship event, incorporating secret hints and puzzles hidden across browser developer tools.
