Education

KR Mangalam World School

High School Diploma

Grade 12 percentage - 95

April 2018 – April 2024

Gurugram, Haryana

Manipal Institute of Technology, Manipal

B.Tech Information Technology

CGPA - 8.93 (up-till Semester IV)

July 2024 – Present

Manipal, Karnataka

Technical Skills

Languages: Python, Java, C, C++, SQL

Tools: Git, Vercel, Render, Pandas, Numpy, Matplotlib, Postman, OpenCV

Web Development: HTML, CSS, Javascript, Tailwind CSS, MongoDB, Express.js, React.js, Node.js

Coursework: Data Structures, Analysis of Algorithms, Artificial Intelligence, Computer Networks, Operating Systems, Database Management, OOP, Computer Organization

Projects

ConceptMap | *MERN Stack* | [Live](#) |  [GitHub](#)

June 2026

- Built a full-stack visual knowledge graph app using React, Node.js, Express, and MongoDB, rendering interactive concept maps with React Flow where users can create nodes, define typed relationships, and track understanding levels
- Implemented a graph-based MongoDB structure using distinct Concept and Connection collections, built a derived connection model that uses dynamic querying of connections to prevent cascading consistency issues when deleting objects.
- Integrated end-to-end CRUD through four-layer REST API (Service, Controller, Route, Server), real-time graph synchronizer, double connection modal, and context-based UI notifications.

Aurora'26 Web Portal | *React.js, tailwindcss* |  [GitHub](#)

January 2026

- Implemented the Hackathon event page and integrated backend REST APIs to support user registration, team creation, joining/ leaving teams, and form validation..
- Collaborated with the web development team to design and build the official website for Aurora'26, supporting an event with 600+ registrations.
- Developed a responsive, user-friendly navigation bar and footer, ensuring a consistent layout and seamless user experience across all pages and devices.

HTTP/1.1 Server | *C++, POSIX Sockets* |  [GitHub](#)

June 2026

- Built a concurrent HTTP server from scratch using raw POSIX sockets and a fixed-size thread pool with mutex-guarded task queue and condition variable synchronization.
- Handles static file serving, MIME resolution, and HTTP/1.1 keep-alive across concurrent connections; achieved 267 req/sec at C=100 on WSL2 (network-bound).
- Designed pool to dequeue and execute outside the lock, eliminating contention between worker threads during task execution.
